Authorized to work in the US

SUMMARY

Data Scientist and Applied Analytics graduate student with 1+ year of experience building SQL/Python pipelines, ML models, and BI dashboards for business decision making. Skilled in data preparation, classification, regression, feature engineering, model evaluation, KPI reporting, and translating analytical outputs into stakeholder recommendations.

EDUCATION

Masters in Applied Data Science , <i>Clarkson University</i>	01/2025 – 05/2026 Potsdam, New York
Advanced Data Science , <i>International Institute of Information Technology</i>	11/2023 – 07/2024 Bangalore, India
Bachelor of Vocation in Software Development , <i>Jai Hind College</i>	08/2021 – 05/2024 Mumbai, India

SKILLS

- **Programming:** Python (Pandas, NumPy, SciPy, scikit-learn), SQL, R
- **Data Science:** Regression, Classification, Decision Trees, Random Forest, XGBoost, Clustering, NLP, Feature Engineering
- **Data & BI:** ETL, Data Cleaning, Data Validation, Data Modeling, Power BI, Tableau, DAX, KPI Reporting
- **Tools:** AWS, Spark, PySpark, MySQL, Docker, Streamlit, Hadoop

EXPERIENCE

Data Analyst (Web & Automation) , <i>Clarkson University</i>	08/2025 Present - Potsdam, New York
• Built a Python + LaTeX to HTML automation pipeline to transform structured academic content into reusable web outputs, reducing manual publishing effort and improving workflow repeatability. • Designed a reusable content templating and validation process to standardize updates, improve documentation, and support reproducible workflows across future academic pages. • Worked directly with faculty stakeholders to gather requirements, prioritize updates, communicate methodology choices, and deliver decision-ready technical outputs.	
Data & Performance Analyst , <i>ROBO+ EduTech</i>	06/2024 – 10/2024 Mumbai, India
• Built SQL/Python ETL pipelines to extract, clean, validate, and structure learner performance data into analytics-ready datasets. • Designed Power BI dashboards to monitor engagement, assessment trends, operational KPIs, and performance patterns for weekly stakeholder reviews. • Automated reporting from raw data ingestion to formatted outputs, reducing weekly data preparation time by 35%. • Analyzed learner performance trends and translated findings into actionable recommendations.	

PROJECTS

Marketing Campaign ROI and Customer Journey Funnel Analysis	05/2026
• Built a 4 page Power BI dashboard to analyze campaign spend, revenue, ROAS, CAC, ROI %, customer funnel conversion, daily trends, and budget recommendations across multiple marketing channels. • Created SQL summary tables and DAX measures for campaign ROI, channel performance, funnel conversion, daily KPIs, and budget optimization insights.	
Accident Risk Analytics: US Accidents + Census Population	01/2026
• Built a Python pipeline to ingest and process 3M+ US accident records, integrating external Census population data to normalize risk metrics at the city and state level ended up with 86.6% city-level coverage after enrichment. • Handled the full data lifecycle: ingestion, schema validation, transformation, and enrichment, producing clean, analytics ready outputs structured for both reporting and ML use. • Trained and compared Logistic Regression, Random Forest, and XGBoost for accident severity prediction; best model reached Macro-F1 of 0.693 and ROC-AUC of 0.868.	
VPN / IPsec Error Log Analyzer	11/2025
• Wrote a Python pipeline to parse unstructured VPN/ IPsec log files into structured tabular outputs, handling noisy, inconsistently formatted entries that couldn't be processed with standard log parsers. • Built a text classification layer using TF-IDF + LinearSVC to automatically tag each log entry across 8 error categories, 3 severity levels, and 18 subcategories, replacing what would have been hours of manual triage. • Wrapped everything in a Streamlit interface with file upload, filtered views, and CSV export so ops teams could use it without touching code; containerized with Docker for easy deployment.	

CERTIFICATIONS

- Software Developer – IT Services – NASSCOM
- AWS: Elastic Load Balancing with Auto Scaling Groups – Udemy
- AI with Machine Learning and Modern JavaScript – Udemy
- Accenture Data Analytics and Job Visualization Simulation
