SUMMARY

M.S. in Applied Data Science graduate with hands-on experience using SQL, Power BI, Python, Excel, and Tableau to build dashboards, automate reporting workflows, validate data quality, and translate stakeholder requirements into actionable insights. Improved data preparation speed by 25%, reduced weekly reporting time by 20%, and analyzed datasets containing more than 3 million records.

SKILLS

- **SQL and Analytics:** SQL, MSSQL, CTEs, window functions, joins, aggregations, ad hoc analysis, trend analysis, root cause analysis
- **Business Intelligence:** Power BI, DAX, Power Query, Tableau, Excel, dashboard development, data visualization, KPI reporting
- **Programming and Data:** Python, Pandas, NumPy, R, ETL workflows, data cleaning, data validation, data modeling, REST APIs
- **Business Reporting:** Requirements gathering, stakeholder reporting, metric definitions, technical documentation, data storytelling

EDUCATION

M.S. in Applied Data Science , Clarkson University	01/2025 – 05/2026 Potsdam, New York
Advanced Data Science , International Institute of Information Technology	11/2023 – 07/2024 Bangalore, India
Bachelor of Vocation in Software Development , Jai Hind College	08/2021 – 05/2024 Mumbai, India

EXPERIENCE

- | | |
|--|---------------------------------------|
| Data Analyst , Clarkson University | 07/2025 – 06/2026 Potsdam, New York |
| <ul style="list-style-type: none">• Translated faculty and administrative reporting requirements into standardized dashboard metrics covering publications, research grants, student advising, faculty contributions, and academic activity reporting.• Developed Power BI dashboards and analytical data models across 10+ academic sections, enabling stakeholders to monitor faculty productivity, research output, publication trends, and section level performance.• Cleaned, validated, and standardized 50+ faculty records using Python and Excel, strengthening reporting accuracy through documented metric definitions, validation rules, and repeatable dashboard refresh procedures. | |
| Data & Performance Analyst , ROBO+ EduTech | 06/2024 – 10/2024 Mumbai, India |
| <ul style="list-style-type: none">• Built 5+ interactive Power BI dashboards using DAX measures, slicers, drill through views, and KPI indicators to improve visibility into productivity, operational efficiency, and business performance.• Increased data preparation speed by 25% by automating Python ETL workflows that combined web scraping, data cleansing, transformation rules, and reusable reporting pipelines.• Reduced weekly reporting time by 20% through Excel pivot analysis, Python automation, trend validation, and root cause analysis supporting operational and financial decision making. | |

PROJECTS

- | | |
|---|---------|
| Marketing Campaign ROI and Customer Journey Funnel Analysis | 05/2026 |
| <ul style="list-style-type: none">• Modeled and analyzed 50K+ customer journey records using SQL and Power BI to calculate campaign spend, revenue, ROAS, CAC, ROI, and funnel conversion performance.• Designed interactive dashboards and DAX measures that identified customer drop-off points, channel efficiency, campaign performance trends, and data-driven budget allocation opportunities.• Produced campaign-level and channel-level performance summaries that helped compare acquisition costs, revenue contribution, conversion efficiency, and opportunities for marketing budget optimization. | |
| Accident Risk Analytics: US Accidents + Census Population | 01/2026 |
| <ul style="list-style-type: none">• Engineered a Python pipeline to ingest, clean, validate, and integrate more than 3 million accident records with Census population data for scalable risk analysis across cities, states, and years.• Achieved 86.6% city-level data coverage and 0.868 ROC-AUC through schema validation, feature engineering, Logistic Regression, XGBoost, and supervised model evaluation for accident severity prediction.• Created analytical visualizations and model evaluation outputs to compare accident severity patterns across locations, population levels, roadway conditions, weather, and traffic features. | |
| VPN / IPSec Error Log Analyzer | 11/2025 |
| <ul style="list-style-type: none">• Classified noisy VPN and IPSec logs into 8 error categories and 18 subcategories using Python, TF-IDF, and LinearSVC to create searchable troubleshooting outputs for faster technical diagnosis.• Built a Streamlit dashboard with interactive filters, CSV export, and Docker based deployment, improving repeatable log analysis, reducing manual troubleshooting effort, and supporting consistent issue investigation. | |

CERTIFICATIONS & TRAINING

Accenture Data Analytics Simulation | Docker | Kubernetes | NASSCOM Software Developer | AWS Elastic Load Balancing
