Authorized to work in the US

SUMMARY

Data Science grad student at Clarkson University with experience in ETL pipelines, Power BI dashboards, and ML models. Built Python automation workflows and processed 3M+ record datasets across education and academic projects. Targeting data engineering and analytics engineering roles.

EDUCATION

Masters in Applied Data Science , <i>Clarkson University</i>	01/2025 – 05/2026 Potsdam, New York
Advanced Data Science , <i>International Institute of Information Technology</i>	11/2023 – 07/2024 Bangalore, India
Bachelor of Vocation in Software Development , <i>Jai Hind College</i>	08/2021 – 05/2024 Mumbai, India

SKILLS

- **Programming:** Python (Pandas, NumPy, SciPy, scikit-learn), SQL, R
- **Data Engineering:** ETL, data pipelines, data modeling, data cleaning, data validation, REST APIs
- **Machine Learning / AI:** NLP, RAG, LLMs, neural networks, classification models, feature engineering, model evaluation
- **Cloud & Tools:** AWS, Power BI, Tableau, Spark, PySpark, MySQL, Hadoop, Docker, Kubernetes, Git, GitHub

EXPERIENCE

- | | |
|---|---------------------------------------|
| Data Analyst (Web & Automation) , <i>Clarkson University</i> | 08/2025 Present - Potsdam, New York |
| <ul style="list-style-type: none">• Took ownership of a faculty research website that had no update process, built a Python + LaTeX to HTML pipeline that reduced manual publishing effort significantly, turning a multi step manual task into a near automated workflow.• Designed a reusable content templating system so that academic pages can be updated consistently without technical intervention, with the goal of scaling it across other departments.• Sole developer on the project; work directly with the professor to scope requirements and prioritize changes. | |
| Data & Performance Analyst , <i>ROBO+ EduTech</i> | 06/2024 – 10/2024 Mumbai, India |
| <ul style="list-style-type: none">• Built ETL pipelines in Python to pull, clean, and structure learner performance data from multiple source systems, previously this was being done manually in spreadsheets every reporting cycle.• Designed and maintained Power BI dashboards tracking student engagement, assessment trends, and operational KPIs used in weekly stakeholder reviews.• Automated the end to end reporting workflow from raw data ingestion to formatted output, cutting the team's weekly data prep time by 35% and eliminating a recurring source of errors. | |

PROJECTS

- | | |
|---|---------|
| Marketing Campaign ROI and Customer Journey Funnel Analysis | 05/2026 |
| <ul style="list-style-type: none">• Built a 4 page Power BI dashboard to analyze campaign spend, revenue, ROAS, CAC, ROI %, customer funnel conversion, daily trends, and budget recommendations across multiple marketing channels.• Created SQL summary tables and DAX measures for campaign ROI, channel performance, funnel conversion, daily KPIs, and budget optimization insights. | |
| Accident Risk Analytics: US Accidents + Census Population | 01/2026 |
| <ul style="list-style-type: none">• Built a Python pipeline to ingest and process 3M+ US accident records, integrating external Census population data to normalize risk metrics at the city and state level ended up with 86.6% city-level coverage after enrichment.• Handled the full data lifecycle: ingestion, schema validation, transformation, and enrichment, producing clean, analytics ready outputs structured for both reporting and ML use.• Trained and compared Logistic Regression, Random Forest, and XGBoost for accident severity prediction; best model reached Macro-F1 of 0.693 and ROC-AUC of 0.868. | |
| VPN / IPsec Error Log Analyzer | 11/2025 |
| <ul style="list-style-type: none">• Wrote a Python pipeline to parse unstructured VPN/ IPsec log files into structured tabular outputs, handling noisy, inconsistently formatted entries that couldn't be processed with standard log parsers.• Built a text classification layer using TF-IDF + LinearSVC to automatically tag each log entry across 8 error categories, 3 severity levels, and 18 subcategories, replacing what would have been hours of manual triage.• Wrapped everything in a Streamlit interface with file upload, filtered views, and CSV export so ops teams could use it without touching code; containerized with Docker for easy deployment. | |

CERTIFICATIONS

- Software Developer – IT Services – NASSCOM
- AWS: Elastic Load Balancing with Auto Scaling Groups – Udemy
- AI with Machine Learning and Modern JavaScript – Udemy
- Accenture Data Analytics and Job Visualization Simulation
