SUMMARY

Data Analyst with experience in Power BI dashboards, SQL analytics, Python automation, and troubleshooting workflows across 3M+ record datasets. Skilled in ETL pipelines, root cause analysis, technical documentation, and stakeholder communication. Targeting Data Analyst, BI Analyst, Technical Support Engineer, and Product Engineer roles.

EDUCATION

Masters in Applied Data Science , <i>Clarkson University</i>	01/2025 – 05/2026 Potsdam, New York
Advanced Data Science , <i>International Institute of Information Technology</i>	11/2023 – 07/2024 Bangalore, India
Bachelor of Vocation in Software Development , <i>Jai Hind College</i>	08/2021 – 05/2024 Mumbai, India

SKILLS

- **Analytics & BI:** Power BI (DAX, Power Query, drill-throughs, slicers), Tableau, Excel (pivot tables, VLOOKUP, conditional formatting), data visualization, statistical analysis, A/B testing, ad hoc reporting
- **SQL & Data:** SQL (CTEs, window functions, joins, aggregations, subqueries), MySQL, data modeling, ETL pipelines, data validation, data cleaning, data quality
- **Programming & Engineering:** Python (Pandas, NumPy, SciPy, scikit-learn, Matplotlib, Seaborn), R, REST APIs, web scraping, Streamlit, CI/CD, Agile/Scrum
- **Cloud & Infrastructure:** AWS, Spark, PySpark, Hadoop, Docker, Kubernetes, Git, GitHub, Linux, CLI tools
- **Networking :** TCP/IP, HTTP, TLS/SSL, DNS, SSH, Linux CLI, remote troubleshooting
- **Support & Collaboration:** Troubleshooting, debugging, log analysis, root cause analysis, incident triage, technical documentation, Jira, Confluence, ticketing workflows, SLA management, stakeholder communication, cross-functional collaboration, requirements gathering, executive reporting, customer-facing communication.

EXPERIENCE

Data Analyst (Web & Automation) , <i>Clarkson University</i>	08/2025 Present - Potsdam, New York
• Built a Python + LaTeX-to-HTML automation pipeline to convert 50+ academic pages into structured web content, reducing manual formatting effort by 60%. • Created SOP documentation and publishing workflows across 10+ sections, enabling repeatable processes for onboarding, knowledge transfer, and cross-team handoffs. • Used GitHub for version control, issue tracking, bug reporting, and pull request reviews within Agile sprint cycles.	
Data & Performance Analyst , <i>ROBO+ EduTech</i>	06/2024 – 10/2024 Mumbai, India
• Built 5+ Power BI dashboards with DAX measures, slicers, and drill-through navigation to track KPIs and business metrics for weekly executive reviews. • Automated Python ETL workflows including web scraping, data modeling, and reporting pipelines, improving data preparation speed. • Performed root cause analysis on operational and financial datasets using Excel pivot tables and Python scripts, reducing reporting time by 20%.	

PROJECTS

Marketing Campaign ROI and Customer Journey Funnel Analysis	05/2026
• Built SQL analytics tables using CTEs, window functions, and aggregations to calculate spend, revenue, ROAS, CAC, ROI %, and funnel conversion rates across 50K+ customer journey records. • Performed cohort analysis and customer segmentation to identify drop-off stages in the conversion funnel, designed Power BI dashboards with reusable DAX measures to deliver decision-ready stakeholder reporting.	
Accident Risk Analytics: US Accidents + Census Population	01/2026
• Engineered a Python data pipeline to ingest, validate, and enrich 3M+ accident records with Census data, performing exploratory data analysis and data visualization to identify geographic and temporal risk patterns. • Performed schema validation, data cleansing, and feature engineering achieving 86.6% city-level coverage; trained Logistic Regression, Random Forest, and XGBoost models (0.868 ROC-AUC) with documented data dictionary and model evaluation metrics for reproducibility.	
VPN / IPSec Error Log Analyzer	11/2025
• Developed a Python pipeline to parse noisy VPN/IPSec error logs into structured outputs for troubleshooting, incident triage, and defect investigation; built a TF-IDF + LinearSVC classification model across 8 error categories, 3 severity levels, and 18 subcategories enabling faster escalation routing. • Created a Streamlit dashboard containerized with Docker for repeatable deployment and CI/CD integration; wrote troubleshooting runbooks and error taxonomy documentation to support knowledge base, onboarding, and reduced mean time to resolution.	

CERTIFICATIONS

- NASSCOM Software Developer | AWS Elastic Load Balancing (Udemy) | Accenture Data Analytics Simulation
